This method is admittedly of great value in cultivating the pupil s powers of accurate observation and manipulation; but from the point of view of the student who proceeds to a College or University, there to continue the subject as part of a course in Science or Medicine, it leaves something to be desired. No instructions for practical work are given, as any teacher can easily select from the many excellent manuals at his disposal those experiments which best typify the principles referred to. Although I have written the book throughout from the point of view of modern theory (so that the student on pursuing his studies shall have as little as possible to unlearn), I have studiously placed theoretical matters in the background, for the reason that in my own experience the beginner does...
